Passport for Open Science - A Practical Guide for PhD Students

<https://www.ouvri.la-science.fr/passport-for-open-science-a-practical-guide-for-phd-students/>

What I learn it ?

- 1- Different types of resources for academic research.
- 2- A DMP is an ongoing document which needs to be created before data collection begins and updated throughout your research project.
- 3- The General Data Protection Regulation.
- 4- Think. Check. Submit website to help you assess the reliability of the journal that you would like to publish in it .
- 5- Peer review is carried out in two stages which reduces the effect of publication bias.

I found this interesting .

- 1- A thesis that is more widely disseminated is much better protected against plagiarism than a work with more restricted dissemination.
- 2- The French National Research Agency (ANR) a The ANR now stipulates that funding will only be allocated if the principles of open science are respected including full and immediate access to publications.
